The world's most advanced composite decking

In this issue
**We take a
look at:**

NEW Enhanced Grain SB
**126mm Square edging
and decking board**

NEW Shadow Line+
**Limed Oak
now available**

The world's most advanced composite decking. Virtually maintenance free.

The perfect deck.

Enhance your outdoors with the beauty of nature but the performance of contemporary outdoor flooring. Millboard decking is unlike conventional composite decking. Hand-moulded from natural timbers in a unique combination of resin and mineral stone, it is almost indistinguishable from real wood, yet designed to outperform it.

Key Features

Made & designed in England for outstanding quality and reliability

UV & weathering stability. Tested at temperatures from -20° to 70°

Dimensional stability. Very minimal movement in the boards

Splinter-free. Millboard does not contain any wood so no splinters

Stain resistant. Non-porous, so will not absorb dirt, drinks, food, fats etc.

Certified P5 Anti-Slip. Millboard achieves Australia's highest slip resistance

Resistant to algae. Unlike wood, there is no protein content to assist algal growth

Environmentally friendly. No trees are cut down to make Millboard

Moulded from real oak for incredibly realistic finish. Not extruded like plastics.

Low maintenance. Millboard never needs to be oiled or sealed

Does not warp or rot. No timber content that will rot or can be eaten by insects

'Lost Head' hidden fixing using DuraFix stainless steel trimhead screws

Who is Millboard?

Millboard® is made and designed by The Millboard Company Pty Ltd in England. A family-run business, the company has been marrying British craftsmanship to the inspiration of nature since 1976. Millboard decking demonstrates the company's commitment to quality and visual distinction. In 2022 The Millboard Company celebrated the 15 Year Anniversary of the release of Millboard into the UK market - Truly standing the test of time.

Approved Global Distributors

Millboard approved global distributors provide a way for international customers to live life outside. From the heat and extreme temperature changes of Western Australia, to the freezing temperatures of a Russian winter. In Australia Millboard is imported by Concept Materials, the approved Global Distributor for Australia since 2012. Working in partnership with Timber Distributors we supply

and promote Millboard® decking to the Australian market and are responsible for producing this magazine featuring local content.

Wherever you are in Australia please contact us on 1300 626 273 or www.conceptmaterials.com.au Our team look forward to helping assist in achieving your outdoor dream.

What is Millboard?

Millboard is a resin mineral composite, cast from the natural beauty of real wood and crafted with the high performance of polyurethane & fibreglass - materials widely recognized for their strength. Polyurethane is used in many industries where durability and strength is required, eliminating the inevitable rotting, warping and deterioration of natural wood. Millboard maintains a functional and highly attractive deck for years to come.

Tough

The unique Lastane® layer resists scratches and stains and is designed to withstand more demanding outdoor environments than timber can.

Enduring

The dual-tone surface layer is hand coloured using pigments designed to improve resistance to sun damage and fading

Beautiful

Each length is hand moulded using specially selected timber masters for an unrivalled organic wood-grain appearance in a composite material.

Safer

Millboard is wood-free and non-porous, which means high resistance to algae growth and excellent anti-slip properties.

Stronger

The structural core is a blend of natural minerals bonded in a polymer resin with long fibre reinforcement for added strength.

Durable

Millboard decking is solid, not hollow. This makes it strong and means it won't warp, rot or harbour insects and pests like timber would.

Enhanced Grain

176mm x 32mm x 3600mm

Millboard Enhanced Grain collection is moulded from selected smooth timber that provides a stylish dignity, with hand colouring recreating the subtle nuances that only natural wood can give. Highly durable with exceptional anti-slip properties, each of the shades showcase the grain beautifully.

These swatches are representative only; due to the replications of natural hardwood the complete deck may have slight variations in colour tone and graining. We recommend requesting a free sample so you can see the colours in real life.

PROJECT HIGHLIGHT

Luxury multi-residential
build, complete with external
communal areas, swimming pool,
spa and decks overlooking the beach.

Situated in Rose Bay in Sydney this high-end development consists of 9 residential apartments, 2 commercial and 2 retail tenancies. What made this project unique was that each individual apartment was tailored to each owners design and style preference making them the types of homes that turn heads. Millboard's wide range of colours and low-maintenance appeal

offered owners the flexibility and creativity perfectly suited for this build.

Refined, stylish and conveniently located, no expense was spared in creating this luxury village. From the extensive landscaping, a pool that overlooks Rose Bay beach to the top floors that take in the breathtaking views.

Antique Oak Enhanced Grain

Size: 176mm x 32mm x 3600mm

Colour Type: Dark

millboard®

Live.Life.Outside.

Introducing Antique Oak, inspired by the deep natural hues of tropical hardwood & historic timber flooring.

Reminiscent of fine hardwoods such as English Walnut or Mahogany enriched over years of care. Antique Oak boasts more tonal variation per individual board than any of the other colours in the Millboard range, providing a beautiful and organic look. Ideally suited for both heritage designs or to complement the new, bolder colour palettes of today's contemporary homes and gardens.

Realistic variation in colour.

One of Millboard's goals is that no two boards should be the same. The authentic hand colouring and secondary toning recreates the natural differences seen in timber. There may be variance within the same board or from board to board in colour tone. This means that samples cut from boards may vary from the general colour of the decking. Expect your boards to be unique!

“We chose Millboard because of the low maintenance and Millboard looks most like real wood out of other composite manufacturers, we did a lot of research and received samples. The choice became easy. Millboard looks great.”

Finishing Accessories

The Millboard range includes special finishing accessories that can take your project to the next level. Including rolled face Bullnose Boards which are perfect for stairs, bench seating and framing the perimeter of the deck. The Enhanced Grain SB which has a sharper modern square edge that can also be used as a narrower decking board. There are also flexible versions available for curved decks as well as Fascia boards for screening or enclosing the deck.

Millboard recommends that these purpose-made edgings are fitted to all steps and perimeters of the deck, as they're coated with extra Lastane for added resilience on these areas.

Profile: Integrated Grip Strips
Finish: Enhanced Grain
Uses: Jetties / Wharf, Ramps
Aged Care, Feature Border

Optional Finish: Extra Grip

Size: 200mm x 32mm x 3600mm
Available in Coppered Oak & Golden Oak only

The beautiful wood grain is still clearly evident between the integrated grip strips. Although both the Enhanced Grain & Weathered Oak standard decking profiles are already P5 Anti-Slip rated - if you need extra safety and assurance, Lasta-grip is the perfect solution.

Quick & easy fixing solution for a clean finish.

This innovative tool provides a quick and easy solution to fix the boards from the side, resulting in a clean, hidden fixing finish, keeping the face of the board clear of screw holes. This quality gives a clean look, even when used with lighter coloured boards.

To use, the Guide simply lays over the decking board and is adjustable to board widths of 145-200mm, making it compatible with Millboard decking boards, and even some softwood decking boards. When used in combination with Durafix® screws and the complimentary driver bit, the Guide aligns the screws perfectly and controls the fixing depth too, providing a 6mm spacing between boards.

NEW

OPTIONAL DuoFix Side-Fixing Guide

Watch the screws disappear!

Durafix® Screws provide a quick and easy fixing solution with their unique 'lost-head' hidden fixing. There's no need to pre-drill, countersink or use clip fixings, simply fix the boards in accordance with our installation guide. Once the screws have been applied, the innovative Lastane coating on the board flexes back over the screw-heads, leaving a minimal witness mark. The Durafix fixings can also be used with the DuoFix Side-Fixing Guide for a clean, hidden finish.

Weathered Oak - Vintage Oak

Weathered Oak

200mm x 32mm x 3600mm

Beautifully aged and utterly timeless, Millboard's Weathered Oak collection is moulded from 100-year-old reclaimed oak timber, and hand-coloured with authentic tones. Providing an instant worn look, it retains its natural beauty for decades and offers an almost maintenance-free surface with very high slip-resistance.

These swatches are representative only; due to the replications of natural hardwood, the complete deck may have slight variations in colour tone and graining.

Raw & rustic aged timber look.

Weathered Oak Vintage is a bold, unique look that captures dark earthy tones & charm inspired by the worn wood of old railway sleepers. Perfect for country getaways or chic inner city spaces. Vintage has also proven a popular choice for landscaping, garden paths and walkways through the rainforest.

Pictured: This incredible garden by landscape designer Philip Johnson (of Chelsea Flower Show Best in Show 2013 award winning fame) was created with tranquility and sustainability in mind. The raw & natural Vintage hues blend effortlessly with the native Australian planting. Decking install by Leisure Decking.

RECOMMENDED MILLBOARD INSTALLER

Frequently Asked Questions

Where can I use Millboard?

Millboard is extremely versatile and can be used in practically every outdoor space. Create decks, cladding, balconies, roof gardens, boardwalks, bridges, pontoons, seating, steps, screening, planters and more.

What does Millboard look like?

Its appearance is a highly convincing timber decking board, with realistic wood grain, tone and texture. This look is achieved through a process of hand-moulding genuine timber boards, which are then hand-tinted, making each piece of Millboard unique.

What is it made from?

Millboard is a composite material produced from polyurethane resin and mineral stone flour, more commonly referred to as a resin mineral composite (RMC). The RMC is reinforced with glass fibres for exceptional strength, and contains high-quality pigments and UV inhibitors for durability and lasting beauty.

Where can I see Millboard?

All around Australia there are places that you can see Millboard - Including full size decks at display homes, accessible commercial projects, public spaces such as council boardwalks, public and private schools as well as showrooms run by our retail partners that feature all the colours in the range. Contact us and we can let you know the nearest location.

What does 'Low Maintenance' or 'Virtually Maintenance Free' mean?

Unlike natural timber Millboard never needs to be oiled, sealed or sanded - ever. We don't say 'No Maintenance' because you will still want to give your deck an occasional clean to keep it looking fresh, but as Millboard is non-porous dirt/stains are not absorbed into the boards so usually just a light brush with some soapy water and a garden hose and you're done!

Is Millboard Anti-Slip?

Yes, all styles of Millboard achieve the highest anti-slip rating available in Australia even in wet conditions and is certified for P5 use. Report available to AS4586: 2013.

Are Millboard colours consistent?

As with all flooring, we advise buying all the Millboard you need at the same time to help ensure that the colour is as consistent as possible. If you don't order all your Millboard at once, you can blend different batches to create only subtle variation throughout your space.

Can Millboard be cut just like wood?

Millboard can be cut with standard saw blades, although we recommend a carbon-tipped, multi-purpose chop saw. As the formed end of the board is lost when cut, these can be placed in less visual areas against a wall or edging. Matching Touch-Up Coating for exposed ends is available to buy separately.

Does Millboard have a hidden fixing?

Yes, the DuraFix® stainless steel screws are designed specifically for Millboard and are designed to sink into the surface of the boards. There is no need to pre-drill or countersink Millboard and the unique Lastane® material self-heals, leaving a virtually indistinguishable mark on the surface. Hard to believe? Watch the video online to see in action. See www.timberdistributors.com.au/millboard/fixings.html

How do I clean Millboard?

Because Millboard is made of non-porous composite, it resists mossy build-up and stains, so needs very little maintenance. To remove spills and marks - or just generally give your deck a clean - simply use a mild detergent, garden hose and a brush. Steer clear of solvents, chemicals or abrasive cleaners that could damage your Millboard. Similarly, Pressure Washing is usually not necessary and may damage the boards at high pressure.

Does Millboard have a fire rating?

Yes - Millboard has been tested and certified in Australia for Australian Bushfire Resistance AS 1530.8.1 - 2007 - The boards achieve a BAL A19 Rating. Report available on request.

Is Millboard suitable for coastal environments? How will salt water effect Millboard decking?

Millboard is perfect for use in marine environments or by the beach. Salt water will not corrode Millboard decking.

Does Millboard fade?

Millboard has a very high resistance to fading, this is because it contains no wood fibres which typically fade and leach tannins. Millboard has been UV Stability tested to BS EN ISO 4892-2: 2006 with a result of 2% LRV (shift over 5000hrs) (Exceptional). In Australia's extreme conditions everything fades - both natural & man-made. With that said compared to timber or other composites - Millboard offers best-in-class outdoor performance.

Can Millboard be laid on the ground? Does it require minimum clearance?

Millboard is chemically inert & does not contain any timber so the boards will not absorb moisture, swell, warp or rot in the way that timber does. As such Millboard does not require any ventilation or minimum clearance from the ground making it perfect solution for ultra-low decks.

Can the Millboard be used on a flat roof or over balconies / concrete slabs with waterproof membranes?

Yes, Millboard is perfectly suited for use as roof decking. For a single ply membrane roof, use the Millboard DuoLift adjustable plastic pedestal system to avoid any point loading and raise the joists above any standing water, prolonging their life while also acting to reduce sound transfer. The DuoLift pedestal systems allow water to flow freely across and then off the roof membrane. Recommend using in combination with the LOW-DECK H4 Joists.

Can I get samples?

Absolutely - There's nothing quite like seeing Millboard for yourself. Let us know what your favourite colours or styles are and we'll post out a piece of each straight to your door - free of charge. We also have Architect Sample Packs available which have one of each colour in the complete range - Fantastic for showing clients. To order free samples simply call or contact us on online at: www.timberdistributors.com.au/millboard

Do you have official installers?

At this stage in Australia we do not have an official Millboard Approved Installer program. But we can definitely put you in touch with recommended installers in your area who are very experienced working with Millboard. Contact us below.

Does it expand and contract?

As Millboard is made from a resin mineral composition it is stable in comparison to timber or composites based on timber, the amount of movement that is acceptable is up to 0.2%. We recommend a 4mm gap between the sides of boards and a 1mm gap between the ends of boards, a 10mm gap should be left between the boards and any solid surface to aid drainage.

How much does Millboard cost?

Please contact us for pricing.

2x

PRIMER
SEALED

50

YEAR TREATMENT
GUARANTEE*

NEW Darker Colour
+ Bigger Spans

*50 Year Limited Warranty on Koppers MicroPro® Wood Treatment Technology against rot & insect attack.

Why use LOWDECK?

Framing timbers on the ground or lower than 150 mm should be termite resistant and in-ground durability Class 1 or treated to **H4 or better**.

(Source: Technical Design Guide - Forest & Wood Products Australia - Domestic Timber Deck Design)

LOWDECK is designed to last.

Treated to H4 with Koppers Micro® Timber Treatment Technology, LOWDECK is protected from fungal decay, termites & insect attack. Suitable for ground contact use and supported by a treatment warranty of 50 years. Engineered GL8 structural grade (roughly F7 equivalent) and double sealed with a high-quality oil-based primer to provide further protection.

LOWDECK is an affordable, easy to work with alternative to steel or aluminium and is a smart upgrade from regular H3 Treated pine joists.

Millboard Envello Cladding

Each length of Millboard Envello cladding is the result of a long process of craftsmanship and attention to visual detail. Just like the specially selected Oak timbers used to create the unique moulds, the fine details and natural imperfections in the original timber has been recreated to be highly durable.

Burnt Cedar - Shadow Line

Perfectly imperfect

From the initial laying of the elastomeric surface, right through to the pouring of the fibre-reinforced resin mineral, Millboard focuses on achieving a quality of finish, reflecting the true random and natural characteristics of the original timber.

Millboard's passion is to accurately reproduce the original whilst adding to the benefits of our unique board technology. This is why many of our processes are carried out manually. For example, each piece is hand coloured to establish the authentic wood finish our boards are renowned for.

Tough

The unique Lastane® layer resists scratches and is designed to withstand more demanding outdoor environments

Enduring

The dual-tone surface layer is hand coloured using pigments designed to improve resistance to sun damage and fading

Beautiful

Each length is hand moulded using specially selected timber masters for an unrivalled organic wood-grain appearance in a composite material.

Durable

Millboard cladding is solid, not hollow. This makes it strong and means it won't warp, rot or harbour insects and pests like timber would.

Lightweight

Millboard's unique closed 'cellular' internal structure reduces weight while maintaining strength and increasing thermal performance.

Stronger

The structural core is a blend of natural minerals bonded in a polymer resin with long fibre reinforcement for added strength.

Wood free

Millboard cladding is wood-free and non-porous which, in comparison to timber, means there's no leaching or releasing of tannins to other surfaces.

Shadow Line Envello Cladding

Size: 200mm x 18mm x 3600mm

Installed cover: 181mm

Boards per m2: 1.53

Profile:

NEW

Shadow Line+
Limed Oak

Envello® Shadow Line

These swatches are representative only; due to the replications of natural hardwood, the complete cladding may have slight variations in colour tone and graining.

An unmistakable organic looking cladding profile that cannot be beaten.

The Shadow Line board has been designed to perfectly replicate smooth timber with a flat grained finish, giving a clean authentic look. The increased width of the Shadow Line board compared to standard timber boards means that there is larger grain detail. This gives an enhanced visual impact, without the risk of the board twisting or warping over time. The Shadow Line board has been profiled with oblique angles to prevent water collecting between two profiles, as well as helping rain water wash over the face of the cladding. The indent created between boards gives visual definition to the individual grain patterns.

FINISHING ACCESSORIES

Corners & Trims

Add a finishing touch to your Millboard Cladding project. With Millboard's specially designed edging profiles, the corners are dressed to make the whole project come together.

38mm x 38mm x 3050mm Internal Corner
50mm x 50mm x 3050mm External Corner

NEW

Board & Batten Envello Cladding

Size: 200mm x 26mm x 3600mm

Installed cover: 181mm

Boards per m2: 1.53

Profile:

Envello® Board & Batten

These swatches are representative only; due to the replications of natural hardwood, the complete cladding may have slight variations in colour tone and graining.

A truly unique balance for both contemporary and traditional cladding designs.

Millboard Board & Batten collection has been moulded from individual pieces of timber with a range of different masters, creating a truly unique balance for both contemporary and traditional designs. With a tongue and groove profile that only requires fixings through the tongue, the install time is dramatically reduced compared to the traditional method of timber batten-on-board cladding. The profiles on the Board & Batten are designed with differing angles to create shadow definition between the grain patterns, as well as facilitating drainage when used horizontally.

Match your deck with a feature wall or cladding.

millboard®

Live.Life.Outside.

The natural look of timber
cladding without
the maintenance.

PROJECT HIGHLIGHT

Luxury, high end home featuring the new Golden Oak Board & Batten Cladding.

Finding the right product to suit David's family home was made easy with the Millboard.

"We were looking for a high quality, unique and sustainable product, that had a natural character to complement our contemporary design. Natural timbers have been a major component of our homes for decades, but we have been searching for an alternative timber look product, that can stand up to the extreme coastal environment we work in.

This home, like many we build, is sitting right on the coastal salt water, foreshore. Millboard, being made with minerals and resins, supplied us with a natural timber look product, that eliminates our concerns with decaying, movement, shrinkage, colour consistencies and maintenance. Millboard is the only product that could supply us with a high quality, real timber grain look, with a bold and interesting profile that could achieve our performance requirements. Highly recommended."
